40 | Atlanticare | Starting Q1 2010 |
41 | Hershey Medical Center | Starting Q1 2010 |
42 | Intermountain Healthcare | Starting Q1 2010 |
43 | Mayo Clinic, Arizona | Starting Q1 2010 |

*Patient recruitment has been discontinued at the following sites:
10—Hopital Charles Lemoyne
12—U of Alberta
15—HSC Winnipeg
17—Sunnybrook Health Sciences Centre

---

**CT Sub Study**

As per a recently circulated email to all participating North American sites, the REDOXS© CT Sub Study involves the evaluation of body composition of patients enrolled in the REDOXS© study using computed tomography (CT) imaging. To be included, patients must have had a CT of the abdomen/pelvis (visualizing L3) ± 2 days from ICU admission. For patients who qualify, all CT images of the abdomen/pelvis obtained during ICU stay will be provided electronically on disc and forwarded to the University of Waterloo for analysis. These CT results will provide a characterization of the patient population at the time of ICU admission, which provides us with an enhanced understanding of the nutritional needs of patients at the time of ICU admission. Sites will be financially reimbursed for the cost of obtaining electronic copies of the CT scans as well as for any courier costs.

Further information will be communicated following determination of the estimated sample size.
